

Tierrafino Stone

Waterproof shiny, lime-based plaster

INTRODUCTION

Tierrafino Stone is a waterproof shiny lime-based plaster for interior and exterior use. Its strength and marble-like appearance make it ideal for bathrooms and wet-rooms, fireplaces, table-tops, stairways, pillars and other ornamental uses, even floors.

GENERAL

Tierrafino Stone Tadelakt is a water-proof, shiny lime-based plaster for interior and exterior use, supplied as a powder. Tierrafino Stone's strength and marble-like appearance make it ideal for bathrooms, fireplaces, table-tops, stairways, pillars and other ornamental use.

This beautiful finish follows the old Moroccan "Tadelakt" tradition. Tadelakt, freely translated, means to rub in. In this case it is meant that the nearly finished lime coat is polished with a stone, rubbing Tadelakt soap into the surface. The Tadelakt soap, which is based on pure olive oil, adds to the shine, but perhaps even more important, it makes sure the surface is left waterproof.

Floors can be done in Tierrafino Stone, but remain somewhat fragile to, for

instance, small stones in the sole of a shoe which will scratch the finish. Therefore we only advise to use Tierrafino stone in areas where walking is done bare feet or on soft shoes. A minimum of pigments should be used on floors (1-2 %).

Tierrafino imports this material from Morocco and brings it to colour with beautiful earth pigments. This to ensure a 100% natural building material and to create our 6 standard colours that all have a natural look.

Tierrafino Stone Tadelakt, seen in the most exquisite of Moroccan bath houses, lends to a most elegant and serene atmosphere. Tierrafino Stone offers a classic and stylish finish to your bathroom, kitchen and other feature areas in your home and workplace.

PRODUCT DATA

Coverage

At a thickness of 5mm, 5kg Tierrafino Stone covers an area of approximately 1m². A 12.5kg container will cover approximately 2.5m².

Drying Time

The finished Tierrafino Stone will take from 2 to 24 hours to be dry enough for polishing. After approximately 1 week the final colour can be seen. After approximately 6 months the finish will be fully hardened. The walls of a shower cabinet can be used after 1 week; shower floors after 4 weeks.

Maintenance

Do not clean with aggressive cleansers. Instead use Tierrafino Soap. This will not only keep the finish clean but will also maintain the waterproofing.

Time

Tierrafino Stone is a very labour-intensive material. Allow for the application of approximately 4m² per day per operative.

Ingredients

Lime

COLOURS

Tierrafino Stone Tadelakt is available in Delphi white to which pigments can be added for colour. It is also possible to make a choice from our pre-coloured range: Roman Ochre, Nassau Orange, Djenné Red, Iquitos Green and Gomera Grey. These standard colours have been pre-mixed with 100% natural earth pigments.

Please note: Tierrafino Stone is a specialist plaster applied using techniques that differ slightly from those employed for conventional gypsum. Please refer to the Tierrafino technical sheet for more details on this product.
